

Marion Wilson at Palace Theatre Tomorrow Night

High Class Entertainment For Benefit of T. A. C. Come out and Meet the Folks of Long Ago. John McHugh Will Sing.

Miss Marion Wilson will appear in Character Studies of Famous American Types at the Palace Theatre tomorrow (Friday) evening. She will be assisted by John McHugh, the nine year old silver voiced youngster and others.

Miss Wilson is known to have CREATED A STYLE OF ENTERTAINMENT DISTINCTLY HER OWN—daring in originality, artistic and picturesque; but of exceptional educational and moral value as well.

Through the magic of her interpretations the most commonplace types assume interest and charm. We catch a glimpse of the real heart of humanity hidden beneath the masks of the work-a-day world. She re-embodies for us also the people of the Past, or gives a flesh and blood substance to the creation of the pen.

AS AN ARTIST she is experienced, finished in technique and possessed of the inspiration and magnetism of true genius. Her versatility has proved astounding; her skill at transformation remarkable, and her voice is so powerful and flexible that she can impersonate male or female characters with equal facility.

PERSONALLY, Miss Wilson is winsome and vivacious; very business-like and full of sparkle and ideas. She is a University graduate and Master of Arts—also the writer of many breezy articles, monologues and sketches, many of which are used on her own programs.

Reserved seat tickets are on sale at Jones' Drug Store or from members of the committee. Benefit Tuckerton Athletic Club.

Miss Wilson in costume of George Washington's day.

NOTICE

Bids will be received by the Board of Education of the Borough of Tuckerton until August 29th, at 8 P. M. for transporting scholars from West Tuckerton to the High school building.

The Board reserves the right to reject any or all bids.

TIMOTHY PHARO District Clerk.

LOCAL NEWS

BASE BALL SATURDAY
The Germania base ball team will play at Tuckerton Saturday afternoon at the Ball Park. This will, no doubt, be a good game. Come out and see it.

Miss May Grefe of Blue Anchor, was a recent guest of Mr. and Mrs. F. R. Austin.

Harry Mott of Trenton is visiting his sister, Mrs. Charles Cox at Grassmere.

Wharton Barrington of Pensauken, was a recent guest of John W. Polk.

Mrs. Kenneth H. Lanning, daughter, Virginia and son William, of Trenton, are visiting the former's parents, Mr. and Mrs. John C. Price. Mr. Lanning was also here for a short visit.

Mr. and Mrs. Harry Blow, son and nephew of Beverly; Mr. and Mrs. Harry S. Prickett of Philadelphia, are guests of Mr. and Mrs. H. B. Spackman.

John Hayes of Philadelphia, is visiting his mother, Mrs. Etta V. Hayes.

Mrs. Charles Clymer and three children, Elizabeth, Ralph and Billy, together with Mr. and Mrs. Charles Frazier, all of Marlton, were Sunday visitors at the home of their cousin, Mrs. Lydia Falmer. Mr. Clymer is editor and publisher of the Medford Central Record. Mrs. Clymer was Miss Helen Jones, remembered by many in Tuckerton as a regular summer visitor with Rev. and Mrs. James Burns, during his pastorate here.

Rev. Daniel Johnson spent several days last week at the Granger's Picnic and visiting at Pitman, N. J.

The following ladies took a very enjoyable automobile trip last, Friday.

Mrs. May Clunn and three daughters, Hulda, Frances and Elizabeth, of Millville, N. J., are visiting at the home of Mr. and Mrs. F. R. Austin. Mrs. Clunn, before her marriage was Miss Mae Austin, of Tuckerton.

day—Mrs. Sue Brown, Mrs. M. E. Burton, Mrs. Townsend, Mrs. Walter Entwistle, Mrs. Carrie Marshall and Mrs. Archie Pharo. They went with Brannin Atkinson in his Hudson Super Six, taking in the ocean boulevard through Asbury Park, and Ocean Grove. While in Ocean Grove, they

visited the M. E. Home for the Aged, calling on Mrs. Margaret McAllister, one of our friends from Tuckerton, who is making her home there.

Miss Baker of Rochester, N. Y., has been visiting her brother, Percy Baker, of the Radio Station.

Supervising Principal J. Wade Wimer is in Tuckerton, preparatory to the school opening, which is only a matter of days, now. Mr. Wimer says he has enough work to keep him busy nearly all of the intervening time.

James Bird and family of West Main street spent Tuesday in Atlantic City. Mrs. Joanna Jilligan accompanied them. They went with Allen Graf.

Misses Irene and Helen Lantwell, of Brooklyn, are spending a week with Mr. and Mrs. John Spencer.

Mrs. Joseph Lippincott and son Edward were visitors with the former's sister, Mrs. John Spencer last Thursday and Friday.

Mr. and Mrs. Harvey Garrison of Bridgeton were recent visitors with Mr. and Mrs. Calvin E. Parker.

Mrs. Mary O'Hara of National Park, N. J., is visiting Mrs. I. E. Mott, Sr.

Wm. Ireland and family, of East Lansdowne, are making a ten-days' visit in Tuckerton with Mrs. Ireland's brother, Calvin E. Parker.

Mrs. Etta V. Hayes and grandchildren, Jack and Dorothy are at the former's home here for some time. Mrs. Hayes was compelled to give up her recent position on account of her health.

Last Friday evening was the occasion of a jolly time at the home of Mr. and Mrs. N. Claude Smith. It so happens that Mrs. Smith's birthday and her brother-in-law, Barton P. Seaman's birthday, falls on or very near the 19th of August, so, as the Seaman family, of Philadelphia, are spending the month here, they celebrated the two birthdays with one party. The immediate families, with one exception, Leonard Brown, were present and it made quite a number. Needless to say they were lots of fun. Young and old, the years disappeared and they forgot the everyday cares for a season.

Mrs. Clifford Rogers of Borden-town, N. J., and Frank Jones of Elizabeth, spent the week end at the home of Mr. and Mrs. Thomas Cowperthwaite.

Jacob Cowperthwaite of Elizabeth, N. J., was a week end visitor with his family here.

Miss Hilda Quinn is spending a week at Spring Lake with her aunt, Mrs. Cora Vandervere.

William James Hellyer of Perth Amboy, was a recent guest of Miss Hilda Quinn at the home of her grandparents, Mr. and Mrs. Thomas Jones.

Mrs. Richard Yarnell and children, Eleanor and Lawrence of Camden, are the guests of Mr. and Mrs. Joseph P. Smith.

Mrs. Anne Falkinburg, Mr. and Mrs. Twiddy, Mr. and Mrs. Samuel Falkinburg and son Edgar, of Brooklyn are the guests of Mrs. Sue Cox.

Mrs. Anna Alexander and daughters, Bessie and Alma, of Atlantic City, are the guests of Mr. and Mrs. Frank Swain.

Rev. L. V. Brewin of New Gretna will preach at both services in the M. E. Church next Sunday in the absence of Rev. Daniel Johnson, who will attend Camp Meeting at Ocean Grove.

Mrs. Alice Williams of Irvington, N. Y., is a guest of her aunt, Mrs. Howard J. Smith on Wood street.

Mrs. Thomas Maloney of the Pine Tree Inn, New Gretna, was in town on business Tuesday.

Edith and Charles Mathis spent Tuesday with their aunt, Mrs. Walter Paul at Manahawkin.

Mrs. Willis Mott, Mrs. Lillian Plaxco and daughter Elizabeth and niece Florence of Jacksonville, Fla. are visiting Mr. and Mrs. Charles Cox at Grassmere.

The following party from Pedricktown, were guests of Rev. and Mrs. Daniel Johnson over Sunday: Mrs. Ella May Holdcraft, Mr. and Mrs. R. Lee Sailor and Miss Rena Sailor. This was one of Mr. Johnson's former charges.

Rev. Daniel Johnson, wife and daughter, Miss Ethel, also Miss Marjorie Darby are spending several days at the Ocean Grove Campmeeting.

Disastrous Fire This Afternoon

CROZIER BOAT HOUSE AND VALUABLE BOATS DESTROYED. CAPT. WM. P. SMITH BURNED. HEROIC WORK OF FIREMEN.

A big fire destroyed the boat house owned by John P. Crozier below Willow Landing this afternoon. The Lady Betty, belonging to Mr. Crozier and Rainbow, owned by Mr. Latta of Burlington, were also burned and are completely destroyed.

The fire started, presumably from gasoline, as Capt. Smith was found in Tuckerton Creek shortly after the blaze started, where he had either jumped or been blown by the force of an explosion. We were unable to find out just how seriously Capt. Smith is injured as he was taken to his home.

The firemen responded to a hurry call and were soon on the ground, but the blaze spread so rapidly from the gasoline and oil that it was impossible to save the boat house.

The new pumping Fire Engine proved its worth as water was pumped from the creek and it was not necessary to use the street water system.

By heroic efforts the bungalows of H. E. Markland, A. J. Durand and Geo. W. Jones were saved after the former Anderson bungalow, which adjoined the boat house caught fire and was almost totally destroyed.

John H. Kohler, Elmer Mathis, Jas. Palmer, Geo. Hickman, Francis Heinrichs and Clarence Gravatt did some heroic work and received many favorable comments from the crowd when they staid between the burning building and Markland's bungalow and kept a stream of water going against great odds. The flames on several occasions and for several minutes seemed to envelope them but they stuck and saved several properties.

They were assisted by several other firemen who stood ready to take hold if any should drop out.

Just what amount the damage reaches and amount of insurance we are unable to state at this time.

BISHOP NEELEY

AT BEACH HAVEN
Sunday, August 28th, will be a great day for Beach Haven and Long Beach. Bishop Thomas B. Neeley, D. D. LL. D., of Philadelphia, known throughout the world as an expert on parliamentary law, and as an able preacher, will preach at 11 A. M. in the M. E. Church, Beach Haven, and at 3 P. M. will dedicate the new chapel and preach at Beach Haven Terrace. We call special attention to the fact that Bishop Neeley will preach only once in each place. At 8 P. M. in the Beach Haven Church, Rev. J. D. Bills, District Superintendent will preach. There is no doubt but that special features will be introduced at all services on this day.

The attraction of these two able speakers is enough to fill to their utmost capacity, both churches at the above services.

The work of improving Norwood avenue continues.

A new show room and apartment is being erected by Walter Sharp.

Dame Rumor has it that there will be several cottages built this fall. We do not vouch for all her sayings but hope this report is true.

BOROUGH COUNCIL MINUTES

Tuckerton, N. J., Aug. 22, 1921
The regular meeting of the Borough Council of the Borough of Tuckerton was called to order at 8 P. M. by the mayor, T. Wilmer Speck. Councilmen present were Messrs. Heinrichs, Marshall and Allen.

The minutes of July 25th, 1921, were read and approved. The following bills were read and ordered paid: Bill of John H. Kohler, \$68.00 Bill of Jos. H. Brown, \$37.50

Councilman Heinrichs moved that the Clerk make a request to the Tuckerton Water Company to have a representative meet with Borough Council to adjust the matter of taxes and water rents. (Motion was seconded and carried.)

The mayor was requested to inquire of the business men of the town of the advisability of having a Mercantile tax for the Borough.

A communication from Mrs. Margaret Kelley was read and on motion of Council was referred to Kumpff Brothers for settlement. There being no further business on motion, the meeting adjourned.

Jos. H. Brown, Borough Clerk.

BEACH HAVEN

The Long Beach Board of Trade met at the Fire House on Saturday evening and considerable business of an important nature was transacted.

Miss Ada Broome has returned to her home here after graduating from Columbia University.

Master George Osborn is confined to his bed and little hope is held out for his recovery.

Mr. Shier and son of Manasquan were week end visitors here.

E. C. Drake of Philadelphia, spent a few days with his family here. Rev. and Mrs. Frank Stevens of Minatola, are visiting among us.

Several of our townspeople attended the Clam Bake at Pine Beach last Thursday.

Dr. F. H. Green spoke at both services on Sunday and gave a lecture on Monday evening in the M. E. Church. Large congregations greeted him at all services and enjoyed this wonderful speaker.

Our base ball team is doing fine work and we are very proud of them.

Mr. McAllister and daughter of Summit, N. J., are spending their vacation here.

Rev. I. J. B. Hill, wife and son of Silverton, and former pastor of the M. E. Church, were visitors in town early this week.

Bishop J. B. Neeley will preach at the Kynette M. E. Church Sunday morning and at Beach Haven Terrace at 3 P. M. Dr. J. D. Bills will preach here Sunday evening.

The work of improving Norwood avenue continues.

A new show room and apartment is being erected by Walter Sharp.

Dame Rumor has it that there will be several cottages built this fall. We do not vouch for all her sayings but hope this report is true.

Electricity Coming If Folks of Tuckerton Want It

After much anxious waiting on the part of our citizens, the good tidings were made known in the early part of this week that we were in a fair way to have electricity into our borough, when General Manager C. E. Torrey and some of his assistants, arrived in town to make preliminary arrangements.

In order to make this extension it was necessary to get an order for the sale of stock of The Atlantic City Electric Company. This order was granted last Thursday by the New Jersey Public Utility and immediately upon receipt of the word the officers of the Atlantic City Electric Company got busy.

The plan of the company is to sell enough of this issue of stock to build the extension of the line and as soon as this is accomplished, they will commence the construction work, which they hope to complete by the early part of November.

If this improvement is to be a success, it rests upon every citizen who claims a civic pride to respond with a co-operative spirit and assist in the purchase of stock, for unless this is done, it is problematical as to the certainty of a successful outcome.

Not only is there an incentive to get this improvement into our town, but the return on the money invested is an attractive one, yielding 6 2/3%.

The Atlantic City Electric Company has been successfully managed for the past fourteen years and has never missed paying its dividends. This, in spite of war-time conditions. It has a large patronage in Atlantic City, Ocean City, Pleasantville and other localities.

It was not the intention of the officials of the Atlantic City Electric Company to place on sale any of its stock until the latter part of this week; but in order to convince them that our people want it, Mayor Speck took them among a few of the townspeople and in a short time, over one hundred shares were sold, and they departed highly pleased with their successful efforts.

The opportunity is now afforded to those who have been clamoring for electricity in our town, to show their spirit. What will the result be? Will we have enough public spirited citizens willing to get this one great improvement to our town? We cannot at this time afford to have a "slacker's list."

Bids will be received by the Board of Education of the Borough of Tuckerton until August 29th, at 8 P. M., for Janitor of Tuckerton School.

The Board reserves the right to reject any or all bids.

TIMOTHY PHARO, District Clerk.

AMERICAN LEGION TO GIVE ENTERTAINMENT SERIES

Tuckerton Post, No. 215, American Legion has arranged with the Red-path-Brockway Lyceum Bureau for a series of four entertainments to be given during the winter months.

The first will be on Tuesday October 11. The Lillian Johnson Company will appear in a musical.

The second will be on Wednesday, December 7. The Fine Arts Company will give musical sketches.

The third will be on Monday, January 9. The Novelty Four Quartette will appear in instrumental music and songs.

The fourth will be on Monday, March 27. Charles R. Taggart, the musical humorist will furnish an evening of musical fun.

Tickets for the entire series will be \$2.00. Individual tickets 75 cents. These are all high class entertainments and are to benefit the American Legion. This is your opportunity to help the boys who helped you.

Watch for advertisement and particulars next week.

OBITUARY

Charles Atkinson, son of the late Joseph and Martha B. Atkinson died at his home on Main street shortly after 12 o'clock on Sunday last after an illness of several months' duration. He has been gradually failing in health for about a year and had been unable to conduct his business himself for some time. Mr. Atkinson was 45 years of age and lived in Tuckerton all his life, being engaged in business of different natures since his life on the farm, just outside of Tuckerton borough, where he spent his boyhood. He leaned toward the Quaker faith, his mother being a staunch member of that sect, and well remembered as being a regular attendant, when in health. She was nearly always accompanied by her son, Charles. Mr. Atkinson leaves a widow, who was Miss George Bishop, one sister Mrs. Fred Cox and two brothers, Brannin and Walter, Mrs. Cox living in West Creek and the brothers in Tuckerton. Funeral services were held Wednesday at 2 o'clock and were conducted by Rev. E. M. VanNote. Mr. E. P. Jones of Hammonton, and Tuckerton, was the funeral director. Interment in Friends' cemetery.

BEACH HAVEN CREST

The biggest catch of fish off the boardwalk at Beach Haven Crest in Surf fishing was made Friday evening, August 19 by Ellis McMullen of the Anglers Club of Ocean City and Asbury Park fishing club, who with Larry Cobb, well known real estate man of Philadelphia, caught 58 weak fish. McMullen got 43 and Cobb 15, fish weighing from 3 to 7 and one half pounds. The crowd was so great on the boardwalk where they were fishing they hardly had room to haul in their catches. During the day they caught several drum fish in the bay. Mr. McMullen is a well known grain man of the Philadelphia Market.

RADIUM: Mine To Hospital

COLORADO HEADQUARTERS

By JOHN DICKINSON SHERMAN.

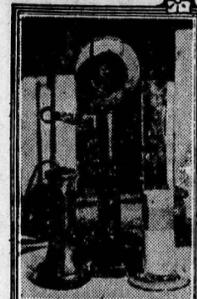

CONCERNING Mme. Marie Curie and her discovery of radium, her recent visit to the United States and the presentation to her by American women of a gram of radium in recognition of her services to science and humanity the reading public is sufficiently informed. Everybody knows that she was made much of by our dignitaries; that ten degrees were conferred upon her by our universities; that President Harding himself made the presentation to her in the White House with appropriate words in the presence of a brilliant gathering of notables, and that a tired and happy woman finally sallied away with her precious gram of radium stored in a mahogany case lined with steel and lead. She said she was going to take a real rest and that she hoped in September to go back to her work in the Curie Institute in Paris—now that she again has radium to work with. The institute divides its work along two main lines. One has to do with the study of radium and radioactive substances purely from the viewpoint of the physicist; the other deals with their application to the treatment of human ailments. She will also carry on an extensive investigation of mesothorium, another radioactive substance—enough of this was presented to her to bring the value of the combined gift to \$165,000.

But where this American radium came from and how it was produced is another story, which may profitably be told in this connection. It is especially interesting, inasmuch as the total world's supply of radium is estimated at only 140 grams (a gram is one-twenty-eighth of an ounce). The illustration by comparison shows how small is this amount. The lower section represents that made by the principal American radium refinery, the dark section that made by other American refineries and the upper layer that produced abroad. So, though radium was not produced in the United States till 1913, this country now has made about five times as much as the rest of the world.

While Mme. Curie, by discovering radium, introduced a new conception into the fundamental problems of existence, she actually produced very little radium, since she was denied the ores with which to work. Moreover, she gave it all away to the medical profession of Europe. A very small portion found its way to New York. In 1911 the late Joseph M. Flannery of Pittsburgh, who had made a success with vanadium as an alloy for steel, devoted his attention to the production of radium. The ores of other countries being out of the question, he turned to the carnotite deposits of southwestern Colorado. Prior to the World war this carnotite ore had been shipped to French and German producers of radium.

The mining and handling of carnotite ore in southwestern Colorado is attended with difficulties. The region is desolate and practically uninhabited. Water is scarce. Flannery had his troubles. He had to train new men. He finally established headquarters at the only spring of clear water within 100 miles; here the Standard Chemical company maintains all the offices for its mining work, transportation and supplies. Eighteen miles away the company built the largest radium concentration mill in the world, through which has passed the ore from which has been refined more than half the world's supply of radium. Burros carry the ores from the mines to the mill, and water and supplies to the miners.

Mme. Curie worked on European ores which contained about one gram of radium to every five or six tons. In the Colorado ores there is about

WORLD'S SUPPLY

one gram to every 500 tons. Moreover, the carnotite miner is a pocket hunter. Sometimes the ore appears on the surface and along rim rocks; then extraction is easy. More frequently the ore is found under a heavy overload of other material; then regular mining tunnels are run and dynamite is used to break the rock for transportation to the surface. The pockets vary widely; some contain only a few pounds, while exceptional pockets have contained 1,800 tons.

First, of course, the pocket must be found. Prospecting is done by drilling in likely spots with jack hammers and with diamond drills. Where the overlay is not more than 25 feet deep the jack hammer, operated by portable gasoline compressors and compressed air, is the cheapest method of working. Under other conditions the diamond drill is used.

Hamilton Foley writes for the Pan American Union an interesting account of the operations of the company and of the production of the radium presented to Mme. Curie; the pictures used herewith are among the illustrations. He says in one place:

"Let us follow the various operations from the extraction of the ore to the final recovery of the radium. At the concentration mill in the wilds of Colorado 500 tons of ore are reduced to about 125 tons. In a powdered form this quantity is shipped in 100-pound sacks, by wagon and, where possible, by motor trucks, the 65 miles to Placerville, Colo. Here a narrow-gauge railroad takes it to the transcontinental railroad at Salida, Colo. From Salida it travels the 2,300 miles to Canonsburg, Pa. Just outside of Pittsburgh, where the company maintains its concentration plant, No. 2.

"It should be noted that at the mill in Colorado, and in the operations pertaining to it, some 800 men are necessary to carry through all the detailed work. Also, that when the ore is taken up by the Colorado mill, there is only 1 part radium for every 400,000,000 parts of the ore; but when the ore reaches the mill at Canonsburg the proportion is 1 part of radium to 100,000,000 parts of the ore.

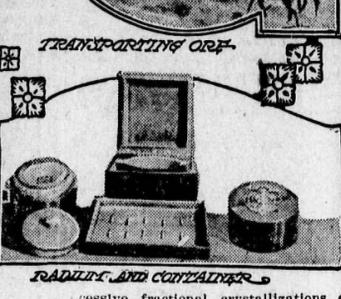

"The task of the Canonsburg men is to reduce this mass of ore to less than a quarter of a ton, and in such a way that whatever radium may have been in the greater mass will be found in the small residue. This is done with regularity and precision, notwithstanding that in the elimination of the 100,000,000 parts of undesirable material the Canonsburg plant has to use 10,000 tons of distilled water, 1,000 tons of coal, and 500 tons of chemicals. It should be noted in this connection that whatever small quantity of vanadium and uranium there may be in this material is saved while this final reduction is being made.

"The actual recovery of whatever radium there may be in the tons of material handled at these two great concentration plants is made elsewhere. When the 125 tons of material that reached Canonsburg from the mill in the West have been reduced to less than a quarter of a ton, this residue is sent to the radium research laboratories of the company in the form of radium barium chloride. By suc-

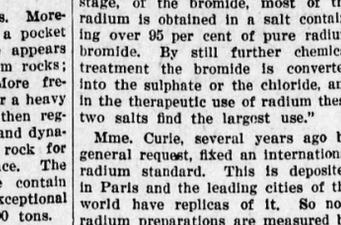

cessive fractional crystallizations of the radium chloride and, at a later stage, of the bromide, most of the radium is obtained in a salt containing over 95 per cent of pure radium bromide. By still further chemical treatment the bromide is converted into the sulphate or the chloride, and in the therapeutic use of radium these two salts find the largest use."

Mme. Curie, several years ago by general request, fixed an international radium standard. This is deposited in Paris and the leading cities of the world have replicas of it. So now radium preparations are measured by comparing the electrical energy carried by their gamma rays with that of the international standard. While radium has still many mysteries, it may be said for the benefit of the general public that its energy appears to be given off in three rays, which are known as the Alpha, Beta and Gamma rays. It is stated that the Alpha and Beta rays are electrical and that the Gamma ray is rather a vibration than a ray. The Alpha ray is believed to comprise 85 per cent of radium's activity; it travels with about the speed of light and has no penetrative power. The Beta ray is about 10 per cent of the activity, travels with about 1-15 the speed of light and can penetrate about an inch and one-fifth of lead. The Gamma ray can penetrate more than three inches of lead; when it strikes a hard substance it breaks up into two rays corresponding to the Alpha and Beta rays.

It is the Gamma ray that is used in bloodless surgery. The Alpha ray does not burn. The Beta ray is kept from the patient by a screen that absorbs it. The Gamma ray seems to have the peculiar quality of picking out useless or harmful tissues for its first attack; it will harm useful tissues only after harmful tissues have been burnt away or dissolved. Radium is handled in glass tubes incased in lead containers. Those who handle it constantly usually get pretty badly burned sooner or later. Flesh burned by radium cannot be healed; it simply disappears and is gone. One of Mme. Curie's hands has been affected and her general health has been undermined by intensive wartime work with radium.

Radium is handled in glass tubes incased in lead containers. Those who handle it constantly usually get pretty badly burned sooner or later. Flesh burned by radium cannot be healed; it simply disappears and is gone. One of Mme. Curie's hands has been affected and her general health has been undermined by intensive wartime work with radium.

A gram of radium makes a small thimbleful. Its current price is \$120,000. A gram is divided into a thousand parts, each of which is called a milligram and sells for \$120. Physicians who use it have from 50 to 250 milligrams. The state of New York has recently purchased 2 1/2 grams for use in the treatment of cancer.

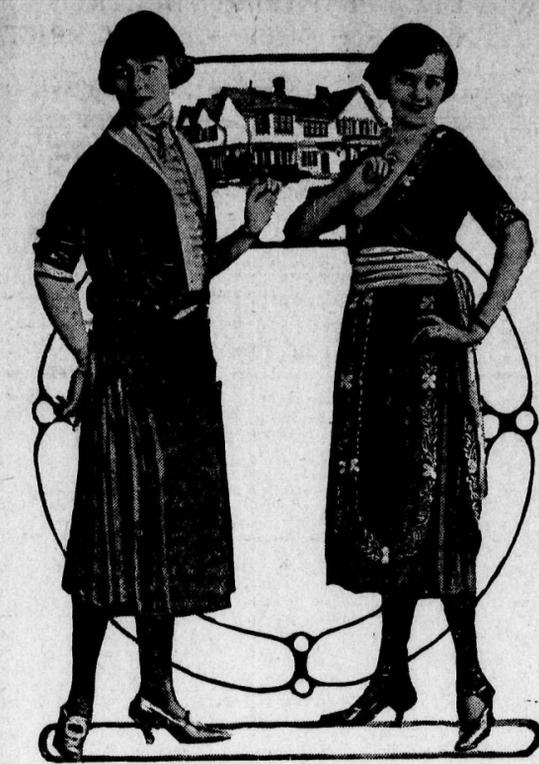

With radium worth \$120,000 a thimbleful, how is it that the dials of even cheap watches can be made luminous by its use? It's this way: The luminous material on the dial is a combination of a most minute portion of real radium and a special zinc sulphide. These atoms are so small that it would take hundreds of millions of them to cover an inch. As each atom explodes, a projectile too small to be seen under a microscope flies off and strikes a crystal of the zinc oxide. The heat generated by the impact makes a flash visible to the eye. As these explosions occur at the rate of about 200,000 a second on the watch dial, their combined flashes make the dial luminous.

who grew stronger every time an adversary threw him to the ground you can "come back" if you go to mother earth. Get out into the open. Go to the streams where the fishes play. Climb the hills where you will be compelled to pant good air into the lower lungs. Chase the wild things of the forest and then try to outdo the thunders with unrestrained haloes and see what nature will do for you. There's something in the careless abandon of nature that puts fitness into the whole man.—Grit.

capacitated for many hours after inspecting a poppy plantation. Deaths have been traced to this cause. The dainty heroine who idly plucks to pieces the petals of a flower must beware which blossoms she chooses for the purpose. Lilies, begonias, rhododendrons and peonies are likely to set up festers.

Avoid Staleness. You can avoid staleness if you have will power enough to assert yourself. Like the fabled hero of the ancients

Suit-Frocks and Others

JUDGING from the examples now on exhibition, of one-piece frocks for fall, we may prophesy a season in which these dresses will follow the lines of the natural figure. It would be more accurate to say that they adjust themselves to it easily and gracefully in a way that is flattering to all figures. Many of them are of the straight line type, showing a very slight definition of the waistline which they contrive to make a little long. Others have bodices bloused, over girdles, all around and still others are bloused at the front and hang straight at the back in the fashion of a "paletot," which extends below the waistline.

Box and side platings are making themselves very useful in one-piece frocks, both in suit-frocks like that at the left of the picture and in dresses that do not simulate a suit. Some of the smartest of the suit-frocks have jackets, capes or other wraps to match but this is the exception and not the rule. The model pictured here, of dark blue cloth, has its bodice faced with beige-colored crepe de chine and turned back to form a collar. It opens to the waistline over a high-necked vest of batiste, voile, net or other sheer wash fabric and has a narrow tie of black ribbon at the throat. Wide, black, cre ribbon is used for the girdle and groups of plaits at the sides break the straight lines of the skirt.

Several successful summer ideas are carrying over into fall and among them are long petal tunics as shown in the dress at the right. Four long petals rounded at the ends, are embroidered with a narrow band in a contrasting color and hung over a plain skirt. The embroidered band outlines the neck and finishes the sleeves. There is a vestee and a wide sash of crepe de chine which match the embroidery in color.

Fall Hats Follow Devious Ways

THE story of millinery for fall and winter is going to be interesting, not to say exciting. Its opening chapter, now being written in hats for early fall, is fascinating, introducing us to new arrivals in the realm of fabrics and trimmings, and intriguing us by the exhaustless ingenuity of designers. Starting with fabrics—velvet and similar cloths, satin, velvet, both plain and panne, are the old familiar favorites that make a foundation or a background for new kinds of brocade and new kinds of embroidery net; brocades that look like cut-out work, nets that look like metallic embroidery on heavy fabrics over which they are posed.

For trimmings, the designer looks to many things, beads of the bugle and seed varieties, and larger wooden beads, soutache braid, narrow ribbons, feathers, silk embroidery and stitchery. And the public, it appears, puts a premium on originality in the use and combination of all these.

As may be gathered from the hats that appear in the group above, hats are far from simple, most of them artfully made by draping fabrics over frames, whose outlines are more or less definitely followed, crowns are soft, or at any rate soft looking, even in blocked shapes. A duvety hat at the upper left of the group is a good example, with a narrow braid that has the effect of embroidery, making an irregular scroll over it. A pl with a dangling head, studded with rhinestones, is thrust in the coronet at the right side. The lovely velvet hat at the right follows the lines of a similar shape more vaguely, and has rosettes of narrow cre ribbon set in a row at each side. The wide brimmed Breton sailor draped with duvety is faced with satin elaborated with braid. Beads and narrow ribbon cover the coronet of the round velvet turban, with a flower and leaf design. The felt shape, with overbrim, which may be either velvet or duvety, makes a fine background for the wreath of chenille flowers applied to its crown.

Stationery. Bright colors in stationery are not good—so many of your letter writing friends, you'll find, are venting their love of the "different" in paper of extraordinary size. The envelopes are almost six inches square.

New Cape Line. The newest type of cape follows Spanish lines and is not unlike the fringed Spanish shawl. The fringe is found in vast quantities and ingeniously knotted.

For Summer. A new fancy for the summer evening is the shawl of crepe de chine, crushed to incredible slenderness about the throat, crossed in back and draped loosely over the shoulders.

Small Hats. The material for the moment for the small hat is toile de soie—similar to the straw you have known as horse-hair, only very much lighter in weight and more supple. It comes in colors.

Man's Quier Ways. "I was going to give Jones a little friendly advice this morning." "And didn't you?" "No, he started to tell me how to run my affairs, and that's something I tolerate from no man."

SARA'S OIL STOCK

By H. LOUIS RAYBOLD.
(© 1911, by McClure Newspaper Syndicate.)

"There!" exclaimed John Chester, turning the key in the old lock. "That's over!" He swung down the trim, box-bordered path, out through the sagging gate, and along the elm-shaded dirt road that led to the railroad station.

So intent was he on catching the afternoon train to the city that he failed to notice the slim girl coming up just behind him, and she, at his disregard, merely sighed without quickening her pace to overtake him. She sighed because it was, in all probability, the last she would ever see of John Chester.

Nor did she need the "For Sale" sign which John had just tacked up to know what for days had been town gossip—that the last of the Chesters had rejected the manner of living of his fathers and was going to the city to seek his fortune. But, because of it, she sighed.

Not that there had ever been a love affair between them.

As the days passed, the sign of the shuttered old Chester house, fast showing signs of unoccupancy, grew to trouble Sara. The farm, unsold and untenanted, was running down. This fact, coupled with reports which drifted back from the city that John Chester's fortune was proving elusive, and that he was shifting from one job to another, tormented her with a sense of the waste of good material and of her own impotency in the matter.

Came a sunny day in late March when Sara cast a bombshell at the feet of the aunt with whom she lived.

"Aunt Julie," she gave out casually over her cup of tea, "I'm going to spend next week-end in the city."

"Sara!" her aunt's voice was startled. "Of all things, Sara!"

"Yes, that's just what I'm going to do," returned Sara unperturbed. "And furthermore—do you remember those old stock certificates that Cousin Jenny left me? Well, I'm going to take them along. Who knows, perhaps they're not as worthless as I've thought them. Just suppose—" and her blue eyes grew dreamy, "perhaps they will bring me my fortune!"

Now it happened that several days after this conversation there walked into the outer office of Whitby & Whitby, brokers, a shabby looking youth with tired lines about his eyes and mouth. A sound of voices from the inner office assured him that his employer was occupied, and sitting down at a dingy desk he rested his head on his hand while his thoughts traveled backward over the discouraging months. Where was he headed? This all but questionable firm in whose employ he was at present held out no future for him. Little by little, taught by bitter experiences, he had learned how unfitted he was to compete with men trained for their jobs.

Into his meditations crept memories of home, of green fields tilled by his father and his grandfather and his grandfather's father, of substantial barns, of the cheery homely dwelling. And with those visions arose persistently the picture of a certain slim, blue-eyed person, the playmate of his boyhood, whom, in his feverish pursuit of fortune, he had all but forgotten.

John Chester sat suddenly upright. Who in thunder was in the inner office talking with old Whitby?

"—yes, I hoped," went on a plaintive voice that awoke in him a sudden, tremendous response, "to realize something on this stock. You see, I have a chance to make a splendid investment. I can buy the old Chester place back home. It is a farm farmed for generations by men who knew how to husband the resources of the soil. But if these certificates are worthless, as you say—"

And then followed the suave tones of his employer. "Just so much waste paper, my dear young lady. Too bad."

A moment later the door opened and John, risen to his feet, met the level, blue-eyed gaze of Sara Cary.

"—why, why, Sara!" was all he managed. Then: "Wait—let me walk a way with you."

For several blocks through the streaming late afternoon traffic of which neither was aware, they walked silently. Sara was the first to speak. "John," she said gently, "the— the bluests are up in the swamp piece. And Dutchmen's Breaches. Remember how we used to go after them?"

"Do I?" exclaimed John fervently. Then he turned impulsively. "Sara!" he cried, "I'm—I'm sick of it all—the hurry, the noise, the crowds. I'm—oh, Sara, I'm going back home!"

But not until their very wedding day did John learn the real secret of Sara's trip to the city. "I can't bear to think," he had chanced to say as they stood for a moment side by side on the clematis-draped porch of the old homestead after a simple ceremony at Sara's home, "of you, my darling, traveling about the city trying to get rid of worthless old stock. You need a husband to keep you from such things."

But Sara threw back her head with a merry laugh. "Why, John Chester!" she cried gaily, "of course I knew they were no good. Only—well, those certificates furnished me with a proper excuse for going to the place I had heard you were employed. You see, if once I saw you, I thought, I hoped—"

"You did," said her husband and kissed her tenderly.

LUCKY STRIKE cigarette

COME TO FLORIDA

and look over our 20 and 40 acre PRODUCING FARMS

land cleared, fenced and ready to plant. Ideal land for early potatoes, all kinds of truck, fruits, nuts and poultry. See what others are doing with this soil and wonderful climate by which 2 or 3 crops can be raised every year. Only 30 miles from Jacksonville, the great market and shipping center of the Southeast, with which it is connected by fine roads. Good schools, roads, churches, stores and telephone service and everything to make practical farming both pleasant and profitable. Very reasonable terms. Write today for particulars.

TIME NOT WHOLLY WASTED

Youth Misled Acquiring Academic Knowledge, but Probably Learned Something Worth While.

The pursuit of learning is not always an easy matter, as a young student found who set forth from Brisbane to study at Edinburgh, for when he reached the port of Falmouth he found that, owing to having taken 200 days on the journey at sea, the term was over. Contrary winds and other contretemps accounted for the delay, during which the crew had to set about finding means of turning some of the corn they were carrying as cargo into bread. They found an old berry-mill—but the story is too long to tell. It is one of the sea's many yarns, and leaves the conviction that that student, if he is worth his salt, will not object to having lost some of the academic year learning of the ways of a barque on the ocean.—Christian Science Monitor.

Notice. A good income is being derived by some people through the sale of Nursery Stock for the Burr Nurseries of Manchester, Conn. This concern is one of the largest in the east and bears an excellent reputation. They are in need of a few more sales representatives who can give either full or spare time, and anyone interested should address a post card to F. J. Rippen, Manager, Manchester, Conn. Because the next two months are the best selling months, they advise prompt action. Only active and reliable men are wanted.—Advertisement.

NOTHING DIFFICULT ABOUT IT

Little Matter of Tactics No Problem at All in the Mind of That Sergeant.

The squad was working out some tactical problems in the field. The scene was laid at Quantico on a particularly hot July afternoon.

Lieutenant (to sergeant)—It is presumed the enemy is advancing in the general direction of that hill. It is also presumed that your machine gun squad has been detailed to delay the enemy's advance as much as possible. Proceed to take the necessary action. Sergeant (wiping his brow)—It is presumed that we have advanced to the sheltered side of that hill; got our machine gun into action; wiped out the enemy and returned to our original position. Will that be all for this afternoon, sir?—The Leatherneck.

"Fluke" Kills 20,000 Sheep. Nearly 20,000 sheep have been killed recently in the Vale of Clwyd, Wales, by a disease known as "fluke," according to a report to the Welsh agricultural council. Experts say the point of attack is in a certain class of soil, and that better drainage of the land is the best precaution against the disease.

HIS OPINION.

"I reckon we mought as well let Gloriosa marry Hamp Lathers if she wants to," said a resident of Fiddle Creek, Ark., to the wife of his bosom. "I asked him today if he expected to keep my daughter in the style to which she had been accustomed, as they say in stories, and the young cuss swelled right up and 'lowed he'd be shot first. Said he thought a wife ort to be treated as well as a horse, anyhow." —Kansas City Star.

THE CROPS OF NEPAL

The chief crops of Nepal, an independent kingdom in Northern India on the southern slope of the Himalaya mountains, are rice, tea, sugar cane, tobacco and cotton. These crops are raised on thousands of small, intensively cultivated farms in the southern part of the kingdom. This region is a broad, fertile plain watered by the Karnali, Gandak and Kosi rivers. Among the mountain ranges of the

north, where there is small opportunity for farming every foot of land in the narrow valleys is used. The hillsides are terraced and the mountain streams utilized for irrigating. In this region there are grown the harder crops, such as barley, corn, wheat, buckwheat and pulse. Though pastures are scarce, the few sheep raised are noted for their fine wool.

A patent has been granted for a seat with a handle on each side to enable two persons to carry a small child.

CONDENSED CLASSICS

VIVIAN GREY

By BENJAMIN DISRAELI

Condensation by Alice G. Grazer

opinions put into the mouth of some one else; so Mr. Grey, looking smilingly at his son, remarked: "Vivian, my dear, can you tell me in what work of Bolingbroke I can find the eloquent passage you have just quoted?"

Mr. Hargrave knew no such thing, but he was a weak man, and, seduced by the compliment, he was afraid to prove himself unworthy of it by confessing his ignorance of the passage.

Vivian carried this same self-assurance into politics and won many triumphs by tactics of the kind. He attached himself to the marquis, and was responsible for his entering politics, spending much time at the estate of the marquis, "Chateau Desir," with large house parties of famous persons, some interesting to him and some otherwise.

Among the guests at one time, was a relative of the marquis, a young matron, Mrs. Felix Lorraine, who was much impressed with Vivian and tried her charms upon him, but to no avail; then in pique, she attempted intrigue to make trouble between the marquis and Vivian, which she came very near to accomplishing.

Meantime Vivian kept his eyes and thoughts for the pawns upon the political chess board, among which was a Mr. Frederick Cleveland, who attracted his attention, and when the marquis's party was looking for a leader, Vivian suggested the name of Mr. Cleveland. Now it happened that these two, the marquis and Cleveland, had been at odds, which Vivian did not at first realize; when he was alone he said to himself: "What have I done? I am sure that Lucifer may know, for I do not. This Cleveland is, I suppose, but a man; I saw the feeble fools were wavering, and to save all, made a leap in the dark. Well, is my skull cracked? We shall see."

Again was Vivian's assurance to the fore; he was certainly "all things to his silver tongue, of conciliating many persons, but not so Mr. Cleveland.

The first great trouble came to Vivian when, after many attempts at diplomacy and the political game, he estranged both the marquis and Mr. Cleveland; the latter while under the influence of wine, met Vivian at their club and in a fit of anger struck him and a duel was the result. Vivian fled into the air, hoping that the affair would end safely, but Cleveland insisted upon another shot; Vivian shot at random, but his bullet pierced Cleveland's heart.

A great remorse seized Vivian and for many weeks he was ill with fever at his father's home, under the loving care of his mother. "But the human mind can master many sorrows," and after a desperate relapse and another miraculous rally, Vivian Grey arose from his bed. He left England and traveled in Germany, visiting, among other places, Frankfurt during the time of the fair.

On a bright sunny afternoon, while crossing the Square, Vivian was attracted by an excited crowd of people around a conjurer, whose appearance was of the oddest kind, and held Vivian's attention; he was called Esser-George. Later he became serving man to Vivian, who had offered to protect the fellow against the crowd he had in some way angered.

Vivian and Esser-George had many lively adventures during their travels, all of which experiences, whether of political or romance, gave Vivian new ideas of the world, and proved to be a most interesting school for him. He one day rescued a German nobleman from a wild boar, and was invited to visit at his castle; while there a romantic attachment between a young German lady of title engaged Vivian's attention for a time, but his thoughts, in spite of himself, constantly returned to two of his English friends.

Like many a knight and his serving man of olden times, Vivian and Esser-George found themselves on several occasions in very dangerous situations; sometimes it was Vivian to the rescue and at others Esser.

On leaving that part of Germany where he had been entertained as honored guest of his titled acquaintances, Vivian passed through a small settlement where there were going on preparations for a wedding, and Vivian discovered that the bridegroom was an old friend from Heidelberg, Eugene von Kononstein, and he was persuaded to stop and assist at the wedding. All was so quiet and peaceful there that it set Vivian to speculating about his own future.

In the morning the travelers were on their way again; the day being intensely hot and sultry they withdrew to the shade of the woods, and while resting there Vivian asked Esser about his history. For a time they sat in quiet conversation, then were rudely interrupted by the approach of a terrific storm; during which a lake on the top of the mountain burst and became a falling ocean, carrying all before it.

Esser's horse being swept from him he climbed into a tree, but the lightning struck, felling the tree and killing Esser—then "Vivian's horse with a maddened snort, dashed down the hill, his master clinging to his neck; finally standing upright in the air, he hung his rider and fell dead."

CAREFULLY PREPARING POULTRY INSURES HIGHER MARKET PRICE

Preparing Poultry Under Modern Conditions for Market.

(Prepared by the United States Department of Agriculture.)

Not a day passes that inspectors employed by city, state or federal government, do not condemn food of one kind or another because it is unfit for human consumption. Sometimes this is due to deliberate adulteration, an intention to defraud the purchasers, but more often it is the result of improper packing, neglect to consider temperatures to be encountered in transporting from point of origin to destination, or failure to consider the time which must necessarily elapse before the product is likely to reach the consumers' tables.

All this entails not only great loss in money, likely to be reflected in prices demanded of the public, but also it endangers the public health, because occasionally some unworthy article slips through inspection and is served as food. Enough food products spoil every week to form a very important part of the amount needed by the people; and practically all of it might be saved through intelligence and care on the part of the producers and shippers.

After your chickens are fattened and ready to kill, it will pay you to study the methods of killing, bleeding, picking, chilling and packing described fully in bureau of chemistry circulars: 3, "How to Pick Chickens;" 52, "How to Wrap Heads;" 61, "How to Kill and Bleed Market Poultry." Issued by the Department of Agriculture, these circulars may be had by application to the division of publications. The man who hopes to succeed should know everything possible about his proposed market, and its demands.

Broilers in Demand. Ordinarily the demand is for broilers of three sizes—squab broilers, small broilers and large broilers. Squab broilers weigh, dressed, from three-quarters to one pound; small broilers, the size most in demand the greater part of the year, weigh from one to one and a quarter pounds each, and large broilers from one and one-half to two pounds.

Broilers may be sold alive or dressed, in the discretion of the shipper; but if dressed, this should be done according to the demands of the market, and these demands one can learn only by inquiry and study. Getting the product ready for the buyer in the public market has much to do with the price received. The appearance of the article, the manner in

which it is packed, and its condition—these are the points that make a reputation for the shipper.

Temperature to Maintain.

The temperature of chickens when they are alive is 103 degrees Fahrenheit. This must be reduced after killing to 32 degrees Fahrenheit or less before they can be packed for long hauls in refrigerator cars. The time required to chill fowls usually is about 24 hours, and the packer must be sure that the body cavity, as well as the skin and flesh, are free from heat before the birds leave the chill room. Failure to observe this requirement is responsible for much of the ill-conditioned poultry found in the public markets. The range of temperature permitted, too, is small. Below 30 degrees Fahrenheit the flesh is frosted; above 35 degrees Fahrenheit decay proceeds too rapidly to permit of long hauls to distant markets. Of course, the birds can be frozen after they are chilled, and so shipped, and this is a very excellent plan, especially if the haul is across a hot country, say the specialists in the Department of Agriculture.

Packing for Market.

It is customary to pack broilers with the breasts up, and the feet hidden. The prevailing method at present, where refrigeration is available, is to pack the chickens in small boxes holding a dozen each, but small boxes suitable for one or two chickens have recently been placed on the market. If the business is to be permanent the containers should carry the farm name, or the name of the shipper if the farm has no name. An attractive advertisement on the box has a great deal to do with marketing, a fact proved long ago to the satisfaction of shrewd business men.

Small packages are becoming more and more popular. Two layers of chickens in a box are being discarded for a single layer, it being realized that refrigeration is more perfect if the carcasses do not touch, and if pressure on such tender tissue as chicken muscle is eliminated as far as possible. On this account heads are wrapped in waxed paper and turned back where they do not rest against the soft flesh of the breast or thighs. No longer does the packer thrust old cocks, broiling chickens and fowls indiscriminately into a big sugar barrel, pressing them down in his effort to pack tightly, and so bruising the flesh and tearing the skin.

KEEPING DOWN STABLE FLIES

Give Stable Refuse Proper Care and Stack Straw So That It Will Not Be Breeding Hole.

The numbers of stable flies can be kept down by caring properly for stable refuse and by properly stacking or otherwise disposing of straw in a way that will not make it attractive as a breeding place for the flies. Flies cause much distress among animals and at times heavy losses. Control measures are described in Farmers' Bulletin 1097. It can be had free of charge by writing Division of Publications, Washington, D. C.

BIG VALUE OF FOREST TREES

Material Supplied for Use on Farm, Such as Poles and Wood—Protect Live Stock.

Forest trees grown on the farm add to its value and beauty. They supply material for farm use, such as poles, posts and cordwood; and they afford shelter for live stock, and protect crops and buildings from the hot winds of summer and the cold winds of winter. Moreover, they often can be grown successfully on soils too poor or on slopes too steep for the successful production of the ordinary agricultural crops.

APPLY LIMESTONE ANY TIME

Usually Done to Best Advantage in Late Summer When Teams and Men Are Available.

Limestone may be applied at any time when men and teams are available, but this usually is done to best advantage in late summer, fall or early winter. It will seldom, if ever, pay to put on less than a ton to the acre, and more should be used if the soil is very sour. Applications usually are not made more frequently than once in four to six years. The usual application varies from one to two and one-half tons an acre.

INCREASED NITROGEN SUPPLY

Element May Be Added by Proper Soil Treatment, Rotation of Crops and Phosphate.

The supply of nitrogen, the most costly element of food for plants, can be increased through proper soil treatment, rotation of crops, the addition of phosphate and limestone and the growing and plowing under of legumes. All stable manure is to be utilized, and on the older, worn soils of the East and South some commercial nitrogen may be profitably used. Following a crop that is a heavy nitrogen consumer with one that is a light user is good farm practice.

PLAN TO DESTROY CUTWORMS

Pests Work at Night and May Be Killed With Aid of Paddle and Flashlight.

Cutworms sometimes give considerable trouble if the nights are cool and the weather unsettled. A good way to get rid of cutworms in the garden is to go out in the evening after dark with a flashlight and paddle and kill the pests. They may be found on the surface at work at night. It will take but a short time to get rid of cutworms in the garden. This is a quicker and more reliable way than using poisoned mash.

GIVE HARNESS PROPER CARE

Made of Good Leather and Heavy Enough, Set Will Last for at Least Fifteen Years.

Harness made of good leather and heavy enough for the work required of it will last for many years if cared for properly. It is more economical to buy harness that is too heavy than to buy that which is too light for the work. With good care, harness of the proper weight and quality will last at least 15 years, and in many cases harness used on the farm has been in service for 25 years or longer.

Time for Weaning Lambs.

Lambs can be most satisfactorily weaned at from fourteen to eighteen weeks of age; if the shepherd has planned ahead and has good pasture or forage on which to put them, little difficulty will be experienced at this time.

A Good Soil Builder.

Clover is an excellent soil-builder, and if used as a cover crop, will supply nitrogen and organic matter to the soil.

JUST A LITTLE SMILE

GREEN, ALL RIGHT.

A rather green looking chap went into one of our department stores the other day and, sauntering up to the counter, where dozens of men's caps were displayed, he looked carefully through the stock, but seemed unable to find what he wanted.

"Just what kind of a cap are you looking for?" asked the salesman at length.

"Well, said the youth, I bought me a motorcycle the other day, and I thought I'd like one of those caps with a peak at the back."—Boston Transcript.

His Gain.

"She declined to marry him after all."

"I suppose he's heartbroken."

"I don't think so. He says things worked out all right. He asked for a raise in pay, thinking he was about to get married, and received it, and so he's that much ahead of the game."

Argument Didn't Work.

Wife—What did you mean by kissing Charlotte in the hall?

Professor—Did I really, I do not know a thing about it—I must have been absent-minded when I did it?

Wife—Huh! It's very seldom you are so absent-minded toward me!—Kasper (Stockholm).

A Clear Distinction.

"The Blanks and the Browns are both newly rich, but they don't associate."

"Why not?"

"The Blanks feel above the Browns. They made their money in refined sugar, while the Browns made theirs in crude oil."

SUCH IS LIFE

He: I've spent fifteen unhappy years with you.

She: Yes, but you've never spent many unhappy dollars on me.

The Vamp.

A vampire hath a gaze intense, She doesn't think or read much. Some say she has but little sense— But then she doesn't need much.

Why We Snorted.

We sat in front of them at the theater. It was during the tense minute of the play when the heroine was about to part forever from her sweet heart:

"Say," said the woman behind us to her friend: "Do you break many dishes? You know I'm awfully unlucky that way."

A Discouraging Impression.

"People don't read Dickens as much as they used to."

"No," replied Miss Cayenne. "The illustrations in most Dickens publications discourage a reader at the outset. They show people whose clothes are so terribly out of style."

No Self-Flattery.

"Are you a servant of the people?"

"No," replied Senator Sorghum; "I don't feel that way about it. While I enjoy a fair measure of confidence and esteem, nobody thinks of making the complimentary fuss over me that is made over a good servant."

Relatively Safe.

"You are as safe in an airship as you are on the ground."

"Maybe I am," replied the patient citizen. "I live in a town where they have grade crossings."

Information.

Autolst—Where do these two roads lead to?

Farmer—Well, you see, this here road leads to my house, and the other goes straight ahead!

Cheering Thought.

He (gloomily)—"I'm afraid it's no use; your father has such an aversion to me."

She—"Don't worry, dear. He has a still greater aversion to paying my bills."

No More Efficient.

Orator—When I was in Africa I discovered a tribe whose husbands all wore rings in their noses.

Hecker—And were they led round any easier than the rest of us?—Tit-Bits.

No Room for Questions.

"Your husband plays cards a great deal."

"Yes," said young Mrs. Torkins. "Is he a breadwinner?"

"He was last night. They used crackers and ginger snaps for poker chips."

Preparatory Training.

"Johnny," said the teacher reprovingly, "you misspelled most of the words in your composition."

"Yes'm, I'm going to be a dialect writer."

ASPIRIN Name "Bayer" on Genuine

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting genuine Aspirin prescribed by physicians for twenty-one years and proved safe by millions. Take Aspirin only as told in the Bayer package for Colds, Headache, Neuralgia, Rheumatism, Earache, Toothache, Lumbago and for Pain. Handy tin boxes of twelve Bayer Tablets of Aspirin cost few cents. Druggists also sell larger packages. Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.—Advertisement.

New One to Her.

One of Kansas City's welfare societies provides a summer camp for children. Each child is given a thorough outing for \$1 a week. Children are not accepted under the age of nine, but now and then a well-coached child gets by a few months younger. The other day a little girl with all the earmarks of seven years applied with a dollar at the camp. "How old are you?" she was asked. "Nine," replied the child glibly. "When were you eight?" This was an unexpected question. "Eight?" she stammered; "why, do you have to be eight before you are nine?"—Kansas City Star.

SWAMP-ROOT FOR KIDNEY AILMENTS

There is only one medicine that really stands out pre-eminent as a medicine for curable ailments of the kidneys, liver and bladder. Dr. Kilmer's Swamp-Root stands the highest for the reason that it has proven to be just the remedy needed in thousands upon thousands of distressing cases. Swamp-Root makes friends quickly because its mild and immediate effect is soon realized in most cases. It is a gentle, healing vegetable compound. Start treatment at once. Sold at all drug stores in bottles of two sizes, medium and large. However, if you wish first to test this great preparation send ten cents to Dr. Kilmer & Co., Binghamton, N. Y., for a sample bottle. When writing be sure and mention this paper.—Advertisement.

To Make Rain.

To Canadians goes the distinction of proposing one of the most novel uses ever conceived for an airplane. Winnipeg men are reported to be organizing an aerial irrigation company. The aim is to cause the rain by spraying liquid air in the clouds from an airplane, thus causing the moisture to condense. Recently dust was thrown from an airplane on the clouds 5,000 feet high in an unsuccessful attempt to cause rain in Pretoria.

Cuticura for Sore Hands.

Sore hands on retiring in the hot sud of Cuticura Soap, dry and rub in Cuticura Ointment. Remove surplus Ointment with tissue paper. This is only one of the things Cuticura will do if Soap, Ointment and Talcum are used for all toilet purposes. Advertisement.

Bar Trapping of Bear.

Increased bounties on ferocious animals and ferocious birds and protective measures with a view to conserving the bear, which is becoming scarce in many parts of British Columbia, feature new game regulations which have recently been announced. Trapping of bear is now prohibited, and only three bears may be shot in a season. Bounty for panthers has been increased to \$40, timber wolves \$25, crows 20 cents, magpies 20 cents, and big-horn and snow owls, \$1 each.

In Nature's Incubator.

"Don't pick all the flowers, dear; somebody else may want some."

"But, mamma, there's more hatchling."

Fiction Provided For.

The husband was seeing his beloved wife off on a holiday. "Maggie, dear," he said, "hadn't you better take some fiction with you to while away the time?"

"Oh, no, George," she said, "you'll be sending me some letters."

Money Refunded if Not Satisfied. STANDARD PUB. CO. 47-49 West 44th Street NEW YORK

16799 DIED

In New York City alone from kidney trouble last year. Don't allow yourself to become a victim by neglecting pains and aches. Guard against this trouble by taking

GOLD MEDAL HAZEL OIL CAPSULES

The world's standard remedy for kidney, liver, bladder and uric acid troubles. Holland's National Remedy since 1696. All druggists, three sizes. Look for the same Gold Medal on every box and accept no imitation.

Liggett & Myers KING PIN PLUG TOBACCO. Known as "that good kind". Try it—and you will know why.

PARKER'S HAIR BALMS. Beautifies and Softens Hair. Restores Color and Brings Out Gray and Faded Hair. Use on Scalp, Face and Neck. Cleanses, Soothes, and Refreshes. Keeps the Hair Clean and Healthy.

HINDERGORN'S Remedy. Cures Corns, Bunions, etc. Stops all pain, ensures comfort to the feet, makes walking easy. 10c. by mail or at drug stores. HinderGorn's Remedy, Waterville, Me.

They Weren't Cherries.

While going through the grocery department of one of our large stores recently I noticed a crowd around a demonstrator, but I paid no attention to what she was saying. On the table was a dish of what I thought were maraschino cherries. I took one and put it in my mouth. With the first bite I had the crowd around me. I thought I was poisoned and could not understand the laughing and screaming of the crowd. Instead of a cherry, as I thought, it was a capsule containing coloring matter for oleomargarine that the lady was demonstrating. My lips, chin and waist were colored a beautiful yellow. I must have looked like the Yellow Kid. This cured me of the bad habit of sampling things.—Exchange.

Fiction Provided For.

The husband was seeing his beloved wife off on a holiday. "Maggie, dear," he said, "hadn't you better take some fiction with you to while away the time?"

"Oh, no, George," she said, "you'll be sending me some letters."

CASTORIA For Infants and Children. Mothers Know That Genuine Castoria Always Bears the Signature of Dr. J. C. Watson. In Use For Over Thirty Years. CASTORIA. THE CERTAUR COMPANY, NEW YORK CITY.

Lower California Cattle.

In addition to cattle, many excellent mules are raised in Lower California. Horses are rarely used. The faithful burro is the principal means of transportation. Except for a few thousand in La Frontera, there are no domestic sheep in the country. In the southern part there are numerous flocks of goats. The largest cattle ranch on the peninsula comprises at least 1,000,000 acres.

An Apt Illustration.

The teacher was quoting wise saws to the class and getting their opinion about them. She said: "A discreet silence is better than the truth spoken without charity." Can any boy give a practical interpretation of that maxim? Somewhat to her consternation, a freckle-faced lad made this homely application: "If you see a cockroach on the table, don't say anything about it."—From the Outlook.

Sunflower Silage.

Sunflowers proved a good crop for silage purposes in experiments at the Montana Agricultural college. The yield was about thirty to forty tons per acre and they made a high quality silage.

The Water Supply.

It is important at all times to provide fowls liberally with pure, fresh drinking water, but particularly in this the case during the summer months.

Time for Weaning Lambs.

Lambs can be most satisfactorily weaned at from fourteen to eighteen weeks of age; if the shepherd has planned ahead and has good pasture or forage on which to put them, little difficulty will be experienced at this time.

A Good Soil Builder.

Clover is an excellent soil-builder, and if used as a cover crop, will supply nitrogen and organic matter to the soil.

MANAHAWKIN

Mrs. Emma Frederson and Mrs. Laura Frederson and son, also Miss Esther Leiford, are spending a week at Bay View in a bungalow.

Edith and Charles Mathis of Tuckerton and Mary Crane of Beach Arlington, spent Tuesday in town with relatives.

Mrs. Fannie Inman has been entertaining her sister from Bethlehem, Pa., for the past week.

Edward Holland, Barton Bennett and Jack Grammer were all home over the week end.

Mr. and Mrs. William Austin invited the members of the Golden Eagle also the Lady Eagles, to their home at Ship Bottom to spend the evening on Tuesday. They had a delightful time.

Mrs. Daisy Hazelton spent a day in Philadelphia this week.

William Elberson and family of South Amboy are visiting the former's parents, Mr. and Mrs. Edward Elberson.

Edith Predmore has returned to New York after a few days' vacation with her mother, Mrs. Rebecca Predmore.

Let's Holman of Baltimore and mother Mrs. Holman of Mt. Holly, are visiting Dr. and Mrs. J. Hillard. John Willis of Camden, is visiting relatives here.

Mr. and Mrs. Henry Paul of Moorestown are visiting the former's parents, Mr. and Mrs. W. B. Paul. Henry is subbing in Mr. Seaman's place at Beach Haven, while he is enjoying his annual vacation.

Forest Hadsell and family have returned to their home in Philadelphia after spending some time in Philadelphia.

Miss Edna Hazelton is spending her vacation in Bloomsburg, Pa.

Miss Mildred Letts has returned after a three weeks' visit in Pottstown, Pa.

Look on Page Five for the Cent-A-Word Column this week.

The Old Roman Household.
 In the days of old Rome the culinary department of an elegant establishment boasted pans lined with silver and pails of various descriptions richly inlaid. There were egg frames that would cook twenty eggs at once, and pastry molds shaped like shells, and an infinite assortment of griddles, frying pans, cheese graters and tart dishes.

Care of Eyeglasses.
 To prevent the annoyance caused by the accumulation of moisture upon eyeglasses when going from a cold into a warm atmosphere, moisten the tips of the fingers and rub them over a cake of soap, then rub lens and polish as usual. One application daily is all that is necessary.

True Humor.
 In the end we find that the test of true humor is the reaction it makes to the depression, sorrow and sadness of life and its power to give brightness and courage in the midst of disaster. The joke is worth while that makes life more possible and sorrow a little less impossible—that brings a smile amid tears, as sunshine in the heart of clouds is seen cutting its way through the darkness. Yet, despite England's training in trouble, what is there finer than the delicate humor of Oliver Wendell Holmes?—Exchange.

Restoring Luster of Pearls.
 Although there is no method known that will positively guarantee the restoration of the luster of a pearl which has become dull through careless handling, the Ceylonese are said to have a novel way of trying to restore it. They simply feed dull pearls to chickens. After the pearls remain in the chickens' crops a few hours, the fowls are killed and the pearls removed. The light friction to which they have been subjected in the crops of the chickens is supposed to restore their luster, at least to some extent.

Best Body for Hauling Stock

This new rack is the latest in stock body design and has many superior features. It has a loading chute with a floor that folds up and forms rear door to rack. Enables you to load stock anywhere.

Same platform is used for panel sides, or stake sections. Body sides are of heavy hardwood. Floor boards ship-lapped and grain tight.

Let us show you this equipment.

Ford
 THE UNIVERSAL CAR

ABOUT FORD CARS—SOLID LOGIC

THE FORD CAR has been fundamentally right from the beginning. That fact made it "The Universal Car." It has always lead in lowest cost to maintain and operate.

Runabout, Touring Car, Coupe, Sedan, Truck and Fordson Tractor—we have them all and will make reasonably prompt delivery.

Simplicity has ever marked the designing and building of Ford cars, trucks and tractors. Henry Ford and his engineers have always striven for simplicity with strength. The success of the Model "T" Ford car and a great part of the Ford Motor Company's success has come from an early understanding and appreciation of that principle in motor car construction. The fewer the parts in a car, fewer the parts to go wrong. When that simple truth is carried out in producing a car, as it is in Ford cars, trucks and tractors, the result is bound to be a simplicity of design and building that means simplicity, durability and economy of operation.

This simplicity of construction proves itself in the ease with which Ford cars, trucks and tractors are driven. Four million five hundred Ford cars in daily service proves every claim we make.

More than ever we are sure the Ford car is your necessity—let's have your order today.

RIDER COLLEGE OPENS ITS 57th YEAR IN NEW BUILDING

Although the erection of the new home of Rider College was carried on at the height of post-war prices, and in the midst of unprecedented labor conditions, the management did not

omit a single item in the construction of this handsome building that would make it any less than the most beautiful structure ever erected in the United States by a private institution for school purposes.
This new Rider College building occupies a space of 70 by 138 feet on

the corner of E. State and Corroll Sts., only three blocks from the main Pennsylvania Station, regarded by some authorities, the very center of the city of Trenton. It has four stories and a basement, and has a floor space of 50,000 sq. ft. Its facade on both streets is of glazed terra-cotta brick, with solid terra-cotta trimmings, giving it a lustrous appearance.
The attachment of a perfect beauty of design was by no means reached through the sacrifice of purely utilitarian features. Experts were brought from different parts of the

country to give their suggestions in regard to the hygienic requirements exacted by the latest authorities in school architecture. All ceilings are unusually high; the halls are ten feet wide, that is so spacious that congestion is positively prevented. There is a flood of light in every room, making it unnecessary to use electric light at any time during the day. Ventilation is so abundant that during this summer, students uniformly declared that the building was the coolest in the city. On each floor there is a drinking fountain, which

supplies cooled and filtered water to the students. An up-to-date dry-system heating plant has been provided. Cloak rooms and lavatories, rest rooms, a recreation floor and an auditorium add to the comfort of the many students who will attend Rider College during the ensuing year.

Foolish, indeed.
When Billy returned from inspecting the new twins nest door he looked admiringly at his birthday cake that auntie was frosting, and remarked: "Wasn't them kids foolish to be in such a hurry to go and get burned the same day! Now they kin only have one birthday, an' they might have had two."

SALE OF LANDS IN THE TOWNSHIP OF LITTLE EGG HARBOR, OCEAN COUNTY, NEW JERSEY, FOR UNPAID TAXES FOR THE YEARS 1919 AND 1920.

Notice is hereby given that I, Charles Cummings, Collector of the Taxing District of the Township of Little Egg Harbor, in the County of Ocean and State of New Jersey, will, on the nineteenth day of September, 1921, at 2 o'clock, P. M. at Parker's Hall, Parkertown, in said Taxing District, expose for sale and sell the several tracts and parcels of lands hereinafter specified or any part or parts of said lands as may be necessary on which taxes for the years, 1919 and 1920 remain unpaid and in arrears, for the purpose of making the amount chargeable against said lands for such unpaid and delinquent taxes as hereinafter set forth, together with interest on said amount from July 1, 1921 and costs of sale. Said properties will be sold for such purpose in fee to such person as will purchase the same, subject to redemption, at the lowest rate of interest, but in no case in excess of eight per centum per annum. The payment for the sale shall be made before the conclusion of the sale or the property will be resold.
This sale is made pursuant to the provisions of an act entitled "An Act concerning unpaid taxes, assessments and other municipal charges on real property and providing for the collection thereof by the creation and enforcement of the liens thereon, (Revision of 1918)" approved March 4, 1918, and the various acts amendatory thereof and supplemental thereto. The said lands and the names of the persons against whom said taxes have been assessed and the amount of same are as follows:

	1919		1920		Total
	Amount	Interest	Amount	Interest	
Elmer King	\$46.05	\$7.38	\$57.08	\$3.42	\$103.91

A Man for the Ages

A Story of the Builders of Democracy

By IRVING BACHELLER

Copyright, Irving Bacheller

CHAPTER XI—Continued.

One evening, of that summer, Abe came out to the Traylor's with a letter in his hat for Sarah.

"How's business?" Samson asked.

"Going to peter out, I reckon," Abe answered with a sorrowful look. "It will leave me badly in debt. I wanted something that would give me a chance for study and I got it. By Jing! It looks as if I was going to have years of study trying to get over it. Have you got any work to give me? You know I can split rails about as fast as the next man and I'll take my pay in wheat or corn."

"You may give me all the time you can spend outside the store," said Samson.

That evening they had a talk about the whisky business and its relation to the character of Eliphath Biggs and to sundry infractions of law and order in their community. Samson had declared that it was wrong to sell liquor.

"All that kind of thing can be safely left to the common sense of our people," said Abe. "The remedy is education, not revolution. Slowly the people will have to set down all the items in the ledger of common sense that passes from sire to son. By and by some generation will strike a balance. That may not come in a hundred years. Soon or late the majority of the people will reach a reckoning with John Barleycorn. If there's too much against him they will act. You might as well try to stop a glacier by building a dam in front of it. They have opened an account with slavery, too. By and by they'll decide its fate."

Such was his faith in the common folk of America whose way of learning and whose love of the right he knew as no man has known it.

In this connection the New Englander wrote in his diary:

"He has spent his boyhood in the South and his young manhood in the North. He has studied the East and lived in the West. He is the people—I sometimes think—and about as slow to make up his mind. As Isaiah says: 'He does not judge after the sight of his eyes neither reprove after the hearing of his ears.' Abe has to think about it."

In April Abe wrote another address to the voters announcing that he was again a candidate for a seat in the legislature. Late that month Harry walked with him to Pappsville where a crowd had assembled to attend a public sale. At one place there were men in the crowd who knew Harry's record in the war. They called on him for a speech. He spoke on the need of the means of transportation in Sangamon county with such insight and dignity and convincing candor that both Abe and the audience hailed him as a coming man. Abe and he were often seen together those days.

In New Salem they were called the disappointed lovers. It was known there that Abe was very fond of Ann Rutledge, although he had not, as yet, openly confessed to any one—not even to Ann—there being no show of hope for him. Ann was deeply in love with John McNeill—the genial, handsome and successful young Irishman. The affair had reached the stage of frank-

dooryard of the tavern when he rode away. He was going back to his home in the East to return in the autumn and make Ann his bride. The girl wept as if her heart would break when he turned far down the road and waved his hand to her.

"Oh, my pretty lass! Do you not hear the birds singing in the meadows?" said Jack Kelo. "Think of the happiness all around you and of the greater happiness that is coming when he returns. Shame on you!"

"I'm afraid he'll never come back," Ann sobbed.

"Nonsense! Don't get a maggot in your brain and let the crows go walking over your face. Come, we'll take a ride in the meadows and if I don't bring you back laughing you may call me no prophet."

So the event passed.

Harry traveled about with Abe a good deal that summer, "electioneering," as they called it, from farm to farm. Abe used to go into the fields, with the men whose favor he sought, and bend his long back over a scythe or a cradle and race them playfully across the field of grain cutting a wider swath than any other and always holding the lead. Every man was out of breath at the end of his swath and needed a few minutes for recuperation. That gave Abe a chance for his statement of the county's needs and his plan of satisfying them. He had met and talked with a majority of the voters before the campaign ended in his election in August.

At odd times that summer he had been surveying a new road with Harry Needles for his helper. In September they resumed their work upon it in the vicinity of New Salem and Abe began to carry the letters in his hat again. Every day Ann was looking for him as he came by in the dim light of the early morning on his way to work.

"Anything for me?" she would ask.

"No mail in since I saw you, Ann," was the usual answer.

Often he would say: "I'm afraid not, but here—you take these letters and look through 'em and make sure." Ann would take them in her hands, trembling with eagerness, and run indoors to the candlelight, and look them over. Always she came back with the little bundle of letters very slowly as if her disappointment were a heavy burden.

"There'll be one next mail if I have to write it myself," Abe said one morning in October as he went on.

To Harry Needles, who was with him that morning, he said:

"I wonder why that fellow don't write to Ann. I couldn't believe that he has been fooling her, but now I don't know what to think of him. I wonder what has happened to the fellow."

The mail stage was late that evening. As it had not come at nine Mr. Hill went home and left Abe in the store to wait for his mail. The stage arrived a few minutes later. Abe examined the little bundle of letters and newspapers which the driver had left with him. Then he took a paper and sat down to read in the firelight. While he was thus engaged the door opened softly and Ann Rutledge entered. The postmaster was not aware of her presence until she touched his arm.

"Please give me a letter," she said.

"Sit down, Ann," said he, very gently, as he placed a chair in the fire-glow.

She took it, turning toward him with a look of fear and hope. Then he added:

"I'm sorry, but the truth is it didn't come. It is terrible, Ann, that I have to help in this breaking of your heart that is going on. I seem to be the head of the hammer that hits you so hard, but the handle is in other hands. Honestly, Ann, I wish I could do the suffering for you—every bit of it—and give your poor heart a rest. Hasn't he written you this summer?"

"Not since July tenth," she answered. Then she confided to Abe that her lover told her before he went away that his name was not McNeill but McNamar; that he had changed his name to keep clear of his family until he had made a success; that he had gone East to get his father and mother and bring them back with him; lastly she came to the thing that worried her most—the suspicion of her father and mother that John was not honest. "They say that he probably had a wife when he came here—that that is why he don't write to me."

Then after a little silence she pleaded: "You don't think that, do you, Abe?"

"No," said the latter, giving her the advantage of every doubt. "John did a foolish thing, but we must not condemn him without a knowledge of the facts. The young often do foolish things and sickness would account for his silence. You go home and go to sleep and stop worrying, Ann. You'll get that letter one of these days."

A day or two later Abe and Harry went to Springfield. Their reason for the trip lay in a talk between the postmaster and Jack Kelo the night before as they sat by the latter's fire-side.

"I've been living where there was no one to find fault with my parts of speech or with the parts of my legs which were not decently covered," said Abe. "The sock district of my person has been without representation in the legislature of my intellect up to its last session. Then we got a bill through for local improvements and the governor has approved the appropriation. Suddenly we discovered that there was no money in the treasury. But Samson Traylor has

offered to buy an issue of bonds of the amount of fifteen dollars."

"I'm glad to hear you declare in favor of external improvements," said Kelo. "We've all been too much absorbed by internal improvements. You're on the right trail, Abe. You've been thinking of the public ear and too little of the public eye. We must show some respect for both."

"Sometimes I think that comely dress ought to go with comely diction," said Abe. "But that's a thing you can't learn in books. There's no grammarian of the language of dress. Then I'm so big and awkward. It's a rather hopeless problem."

"You're in good company," Kelo assured him. "Nature guards her best men with some sort of singularity, not attractive to others. Often she makes them odious with conceit or deformity or dumbness or garbality. Dante was such a poor talker that no one would ever ask him to dinner. If it had not been so I presume his muse would have been sadly crippled by indigestion. If you had been a good dancer and a lady's favorite, I wonder if you would have studied Kirkham and Burns and Shakespeare and Blackstone and Starke, and the science of surveying and been elected to the legislature. I wonder if you could even have whipped Jack Armstrong."

"Or have enjoyed the friendship of Bill Berry and acquired a national debt, or have saved my imperiled country in the war with Black Hawk," Abe laughed.

"In the matter of dress the postmaster had great confidence in the taste and knowledge of his young friend, Harry Needles, whose neat appear-

ance Abe regarded with serious admiration. So he asked Harry to go with him on his new mission and help to choose the goods and direct the tailoring, for it seemed to him a highly important enterprise.

"Our appropriation is only fifteen dollars," said Abe as they came in sight of "the big village" on a warm bright day late in October. "Of course, I can't expect to make myself look like the President of the United States with such a sum, but I want to look like a respectable citizen of the United States, if that is possible. I'll give the old Abe and fifteen dollars to boot for a new one and we'll see what comes of it."

Springfield had been rapidly changing. It was still small and crude, but some of the best standards of civilization had been set up in that community. Families of wealth and culture in the East had sent their sons and a share of their capital to this little metropolis of the land of plenty to go into business. Handsome, well-groomed horses, in silver-mounted harness drawing carriages that shone "so you could see your face in them," to quote from Abe again, were on its streets.

The two New Salem men stopped and studied a big sign in front of a large store on which this announcement had been lettered:

"Cloths, cassinettes, cassimeres, velvet silks, satins, Marseilles waistcoating, fine, calf boots, seal and morocco pumps for gentlemen, crepe lisse, lace veils, Thibet shawls, fine prunella shoes."

"Reads like a foreign language to me," said Abe. "How would you like a little Marseilles waistcoating?"

Suddenly a man touched his shoulder with a hearty "Howdy, Abe?"

It was Eli, "the Wandering Jew," as he had been wont to call himself in the days when he carried a pack on the road through Peter's Bluff and Clary's Grove and New Salem to Beardstown and back.

"Dis is my store," said Eli.

"Your store!" Abe exclaimed.

"Ya, look at de sign."

The Jew pointed to his sign-board, some fifty feet long under the cornice, on which they read the legend:

"Eli Fredenberg's Emporium."

Abe looked him over from head to foot and exclaimed:

"My conscience! You look as if you had been fixed up to be sold to the highest bidder."

The hairy, dusty, bow-legged, thread-bare peddler had been touched by some miraculous hand. The lavish hand of the West had showered her favors on him. They resembled in some degree the barbaric pearl and gold of the East. He glowed with prosperity. Diamond and ruffled lia-

son and Scotch plaid and red silk on his neck and a blue band on his hat and a smooth-shorn face and perfume were the glittering details that surrounded the person of Eli.

"Come in," urged the genial proprietor of the Emporium. "I would like to show you my goods and introduce you to my brudder."

In the men's department after much thoughtful discussion they decided upon a suit of blue jeans—that being the only goods which, in view of the amount of cloth required, came within the appropriation. Eli advised against it.

"You are like Eli already," he said. "You haf got de pack off your back. Look at me. Don't you hear my clothes say something?"

"They are very eloquent," said Abe. "Vell, dey make a speech. Dey say 'Eli Fredenberg he is no more a poor devil. You cannot sneeze at him once again. Nefer. He has climb de ladder up.' Now you let me sell you something vat makes a good speech for you."

"If you let me dictate the speech I'll agree," said Abe.

"Vell—vat is it?" Eli asked.

"I would like my clothes to say in a low tone of voice: 'This is humble Abraham Lincoln, about the same length and breadth that I am. He don't want to scare or astonish anybody. He don't want to look like a beggar or a millionaire. Just put him down for a hard-working man of good intentions who is badly in debt.'"

That ended all argument. The suit of blue jeans was ordered and the measures taken. As they were about to go Eli said:

"I forgot to tell you dot I haf seen Bim Kelo de odder day in St. Louis. I haf seen her on de street. She has been like a queen so grand! De hat and gown from Paris and she walk so proud! But she look not so happy like she use to be. I speak to her. Oh my, she vas glad and so surprised! She tolt me dot she would like to come for a visit but her husband he does not want her to go dere—nefer again. My jobber haf tolt me dot Mr. Biggs is git drunk every day. Bim she 'ink de place no good."

"Poor child!" said Abe. "I'm afraid she's in trouble. Her parents have begun to suspect that something is wrong. They have never been invited to go down there and visit the girl. I reckon we'd better say nothing to any one of what we have heard, at present."

They reached New Salem in the middle of the night and went into Rutledge's barn and lay down on the haymow between two buffalo hides until morning.

Dr. Lillienfeld Discovers Principle That Puts Roentgenology on New Plane.

EXPERTS PLEASSED WITH IT

Scientists Who Have Experimented With New Tube Believe With Doctor Lillienfeld That It Makes Roentgenology Exact Science.

New York.—By the invention of an X-ray tube based on a comparatively simple principle, roentgenology promises, for the first time since Roentgen discovered the mysterious rays that bear his name, a quarter of a century ago, to be an exact science. The inventor is Dr. Julius Lillienfeld, professor of physics at the University of Leipzig. He is also inventor of the X-ray tube that has been in general use in Europe for the last decade, and which from now on will be superseded by his more recent discovery. Experts who have experimented with it believe as he does.

Doctor Lillienfeld is in New York, having arrived from Europe a few weeks ago. He has already given a public demonstration of his new tube in the presence of Prof. George Peckham and Professor Davis at the department of physics of Columbia university and before the New York Roentgen society.

Doctor Lillienfeld explained the principles of his invention to a Times reporter. He said his discovery was not only of interest to the medical profession and physicists, but to makers of wireless and all audion apparatus and amplifying devices.

"In order to explain the principle of this new tube," said Doctor Lillienfeld, "it will be necessary to recapitulate the history of X-ray tubes and to tell the manner in which X-rays are generated.

What Electrons Are.

"Let us begin with the electron: It is the smallest known component of matter and is always associated with an unvarying unit charge of negative electricity. The atom of hydrogen is the smallest atom known. Yet an electron is but 1/2000 part of the hydrogen atom. These electrons are always in motion. It is supposed by some that chemical atoms consist of collections of electrons having orbital motions in a sphere of positive electrification. Others ascribe them to disturbance of the ether.

"An electron striking any matter, target or surface produces X-rays. The electrons must have speed, and, indeed, they move with incredible rapidity. They are negatively charged particles of electricity. There are three factors, therefore, connected with the production of X-rays. They are electron, motion and the target."

Doctor Lillienfeld pointed to a knife blade.

"The electrons associated with that piece of metal," he continued, "are beneath its surface and are retained there by some superficial force. To produce X-rays we must get the electrons out of the metal through the operation of some additional force. Roentgen used gas molecules, which were imprisoned in his glass tube in a partial vacuum, to get the electrons out of the metal, which, in this case, was the cathode by which the electric current leaves, in contradistinction to the anode by which the electric current enters, a vessel. The molecule of gas impinged on the cathode free-

ing the electrons, which, in turn, flew to and impinged upon the anode or target, from which they were thrown off as X-rays which penetrated the glass tube and scattered.

"The method of producing X-rays by the gas tube did not prove satisfactory.

"In 1911 I made my first tube on a new principle. There was absolute vacuum in the tube, and I got the electrons out of the cathode by means of applying heat to it. With the combination of the heated cathode and the extremely high vacuum, the electrons would fly to the anode, or target, where they were given off as X-rays.

"In 1913, Coolidge, in this country, applied the same idea to the tube now in general use here.

New Method Discovered.

"Two years ago I discovered a new method of effecting the release of the electrons from the cathode. This method has nothing in common with either of the two older ones. I started the electrons from a cold, unheated cathode in the presence of a high electrostatic field. This actually pulls the electrons out of the cathode. The second distinctive characteristic of the new method is the shape of the cathode. I use a sharp-pointed or sharp-edged one, on the theory that the lines of electric force are concentrated on the sharp point or edge of the cathode. This proved to be the case

THINKER'S LOT ONE OF JOY

But He Has to Travel a Long and Weary and Rough Road to Attain It.

Your education begins when what is called your education is over—when you no longer are stringing together the pregnant thoughts, the "jewels five-words-long" which great men have given their lives to cut from the raw material, but have begun yourself to work upon the raw material for results which you do not see, cannot predict, and which may be long in coming—when you take the fact which life offers you for your appointed task.

No man has earned the right to intellectual ambition until he has learned to lay his course by a star which he has never seen—to dig by the divining rod for springs which he may never reach. In saying this, I point to that which will make your study heroic. For I say to you in all sadness of conviction that to think great thoughts you must be heroes as well as idealists.

Only when you have worked alone—when you have felt around you a black gulf of solitude more isolating than that which surrounds the dying man, and in hope and in despair have trusted to your own unshaken will—then only will you have achieved. Thus only can you gain the secret isolated joy of the thinker, who knows that, a hundred years after he is dead and forgotten, men who never heard of him will be moving to the measure of his thought—the subtle rapture of a postponed power, which the world knows not because it has no external trappings, but which to his prophetic vision is more real than that which commands an army.

And if this joy should not be yours still it is only thus that you can know that you have done what it lay in you to do—can say that you have lived, and be ready for the end.

—From Collected Legal Papers by Oliver Wendell Holmes.

USED SYSTEM OF HIS OWN

Professor Refused to Allow Proper Spelling to Weigh at All Heavily Upon Him.

Of course "enough" spells "nuff" and yet "calf" is not spelled "caugh." School boys, seasoned business men, not to mention school teachers, often find the spelling of the English language a bit troublesome. But here is a one-time university professor and now eminent scientist who not only admits that spelling "gets him rattled," but goes so far as to invent his own form of spelling, which exactly follows out the sound of the word.

Hence we find such sentences as these in a recently issued volume by the anthropological department of the university museum:

"His hair waz still black."

"The two ritings when they wer don, ov course wer not alike."

"Some paragrafs ov hiz own wer droopt."

"I say az nearly az possible becauz—"

The author of the volume, which is the translation of a legend of the Kerchi Indians of Guatemala, is Robert Burkitt, an Englishman.

in actual practice and the electrons were readily pulled out. I might add that in this method the electrodes (cathode and anode) are brought very closely together.

"The application of the principle is not limited to the production of X-rays. It can be applied to all amplifying and audion devices and for generating electro-magnetic waves for wireless. The tube is less expensive than the heated ones because it contains no hot filaments and, therefore, no transformer is needed to supply heat."

Lay Bandit's Career to Stant in Skull

Tacoma, Wash.—Roy Gardner, small train robber, in the federal penitentiary after two very sensational escapes from guards, may be operated on to "reform" him, according to "Mother McColl, woman agent of the Department of Justice.

"I want to be operated on and lead the life God intended me to lead," Gardner told Mrs. McColl.

"Gardner is a wonderful specimen of manhood," Mrs. McColl continued. "His tendency to crime is caused by a deflection of the cranium, and it is possible that surgical care will eliminate it.

"He is to be X-rayed, and the physician at the prison will send to Los Angeles for X-ray plates which are said to show the seat of his trouble."

Washington.—The arrival in Washington of an envoy from Afghanistan, now perhaps the most mysterious country in the world, seeking the recognition of his home land and the establishment of diplomatic relations with the United States, seems to indicate that the policy of absolute isolation from the rest of the world long followed by this Moslem kingdom is to be modified. Light on conditions in this little-known region is shown by the following communication to the National Geographic society from Frederick Simpich and Haji Mirza Hussein:

"The buffer state of Afghanistan, historic shock-absorber between Great Britain and Russia in Middle Asia, years ago put up a 'Keep Out' sign, a 'This Means You' warning, to all white men and Christians. The land is 'posted'—to use a poacher's phrase—posted against trade and concession hunters, against missionaries, and against all military and political hunters in particular.

"Keep Out" Sign Up.

"And the 'Keep Out' sign is still up. Today the foreigner is no more welcome in Afghanistan than he was a hundred years ago. Forbidden Lhasa

itself is no more exclusive than brooding, suspicious Kabul, the capital of this isolate, unfriendly realm of fanatic tribes, of rocks, deserts, irrigated valleys, and towering unsurveyed ranges.

"For reasons of foreign policy, the amir has long left the necessity of excluding his little-known land to the greatest possible extent from the outside world. Only a few Europeans, mostly British, but occasionally also an American and now and then a few Russians or Germans, have had permission to come into this country and to sojourn for a while in its curious capital. But even on such rare occasions as when a foreign engineer, or a doctor whose services are badly needed, is admitted by the grace of the amir, the visitor is subject to a surveillance that amounts almost to imprisonment.

ELECTRICITY

Only a few years ago regarded as a Toy, a Plaything—a Mysterious Freak Force—has now become the MOST ESSENTIAL ELEMENT of MODERN CIVILIZATION.

TUCKERTON

A City of PROGRESSIVENESS, as is so plainly to be seen by its Beautiful Homes, with their well-kept and spacious lawns, its Up-to-Date Places of Business and Modern Streets, lacks only this MOST ESSENTIAL ELEMENT in its bid for future Fame, Growth and Prosperity.

TUCKERTON

Has reached the point in its life when its time that it takes its place in line with thousands of sister cities of like size who nightly flood their Streets, Stores and Homes with the

MODERN "MATCHLESS" LIGHT

by the mere

"TWITCH-OF-THE-SWITCH"

AND

Whose Wheels of Progress Turn Busily and Continuously through the Agency of that Gigantic though SILENT SERVANT—ELECTRICITY.

The Atlantic City Electric Company

Incorporated under the Laws of New Jersey, is a Going, Growing Concern—indispensable to the Communities it serves; Generating the Most Powerful Force Known to Man; Lighting Cities and Towns and performing myriads of other tasks untiringly, increasingly, day after day, night after night,

AND

The Atlantic City Electric Company

WANTS to come to TUCKERTON and WILL come to TUCKERTON

IF

Following its usual custom it can interest a sufficient number of citizens in the purchasing of enough of its Preferred Stock to warrant the necessary expense attached thereto.

We are preparing to offer in Tuckerton, 400 Shares of Atlantic City Electric Preferred Stock at \$90.00 a Share—Par Value \$100.00, Interest at 6%, or really 6 2/3% on money invested.

PLEASE DON'T OVERLOOK THIS FACT:—The Cumulative Preferred Stock of the Atlantic City Electric Company is NOT A SPECULATION. It is an INVESTMENT of the HIGHEST GRADE.

EVERY DOLLAR you invest in the Preferred Stock of this Company, does its important part in this work, and in addition, brings you a Dividend Check every three months—6 2/3% each year on Your Savings—a good return WITH SAFETY. You accomplish a two-fold purpose; you help in the Progress of Your City and Provide an Income for Yourself—More Business and Greater Prosperity for You and for TUCKERTON.
